TOGGLE SWITCHES

Toggle Switches are lever switches. Models are available for standard line voltage ON/OFF switching and for dry contact switching, making them suitable for use with panel-based home automation systems, such as Lutron Homeworks, Crestron, Savant and Control 4, as well as for conventionally wired installations. One toggle switch fits per gang of a standard junction box. Multi-gang plates can be supplied to accommodate as many switches as required. See our **Plate Dimensions** technical sheet. Junction boxes must be recessed below the finished wall surface by at least 1/8". See our **Junction Box Assembly Diagram** technical sheet. Toggle switches can be mixed with rotary dimmers, push buttons and outlets on the same plate. Technical sheets are available in the Technical Section of our website.
